## GREEN LINE SUSTAINABLE OFFICES

### GREEN OFFICE

A green office is an initiative to create an environmentally friendly and sustainable work environment. It aims to increase the energy efficiency of the workplace, reduce waste, optimize water consumption, control environmentally harmful substances, and improve the health and well-being of employees.

This application was created with an approach that aims to reduce as much as possible the pressure and negative impact of humanity on nature.

# AN ECO-FRIENDLY WORKPLACE

➤➤➤ Green Line Sustainable Offices is a program that aims to raise awareness among all employees about energy conservation, renewable resources, conscious use of natural resources, and lifestyle change, with a focus on reducing carbon emissions.

## WHAT DOES THE GREEN LINE SUSTAINABLE OFFICES PROGRAM GIVE US?

With "Green Office" applications increase energy efficiency and provide savings in electricity and heating/cooling costs.

Recycling programs, reducing paper use, and replacing disposable products with reusable materials are practices that help reduce waste. This not only helps conserve natural resources, but also reduces the cost of waste disposal.

In green offices, efficient use of water is encouraged. Water use is reduced through practices such as water-efficient faucets, reusing water with reusable systems, and using rainwater for garden irrigation..

Green offices contribute to the fight against climate change by reducing greenhouse gas emissions.

**LET US CREATE AWARENESS WHILE CONSUMING NATURAL RESOURCES, LET US UNDERSTAND THE BIG IMPACT WE CAN CREATE BY THE SMALL CHANGES WE CAN MAKE!**

- A dripping faucet wastes **1 LITER** of Water per HOUR.
- It can take up to **100 YEARS** for spent batteries to disappear into nature.
- At least **1000 YEARS AFTER** the plastic bags are released into the nature, these products are completely dissolved.
- Producing only 1 toner cartridge may result in the use of **3 LITERS OF OIL.**

**As MYTEKS Family;**

We provided a total of 164 person/hours of Green Office and Sustainability training to our Factory and Office employees, talking about practices they can incorporate into all aspects of their lives.

We have prepared our roadmap to become a sustainable office and company by ensuring that our Factory and Office are assessed against the "Green Line Sustainable Office/Facility Criteria".

We have reclaimed and reused the wastewater generated in the printing section of our factory.

We created our "Green Board" to remind everyone in our plant and at headquarters of the actions needed to live a sustainable lifestyle.
